South Bay Ford

## South Bay Ford

South Bay Ford chose the FOREVERLAMP GS-400U-VHO-850 lamps to replace their 400w metal halides, and the results speak for themselves.

One service bay mechanic told us he purchased his own light bar to mount on the car engine compartment hoods so he could see the engine compartments better. Now, with the 24,000 lumen GS-400, he no longer needs the extra light.

And all the extra light output of the FOREVERLAMP LED bulbs is delivered using 50% less energy than the previous bulbs which will save significant energy costs for this dealer. Better light quality, better color rendering index, 3 x's longer life cycle, and a 50% reduction in energy consumption and lighting costs made this service bay retrofit an easy decision. And the ROI timeframe made the switch to FOREVERLAMP a deal this dealer couldn't pass up!
